Stedman's Medical Dictionary 27th Edition

somite (so'mit)

One of the paired, metamerically arranged cell masses formed in the early embryonic paraxial mesoderm; commencing in the third or early fourth week in the region of the hindbrain, they develop in a caudal direction typically until 42 pairs are formed. SYN: mesoblastic segment. [G. *soma*, 1 *body*, + *-ite*1]
occipital s. one of the four most rostral s. these become incorporated into the occipital region of the embryonic skull.
